IDENTIFIERS *Los Angeles Community College District CA

ABSTRACT

Using information from the student data files of the Los Angeles Community College District (LACCD), this report provides a districtwide profile of fall 1987 student enrollment patterns by zipcode of residence. The first section of the report contains maps which illustrate, for each of the nine colleges in the district, the numbers of students enrolled from each zipcode within a 10-mile radius of the college. Another series of maps, encompassing the entire LACCD and its neighboring districts, is also included. The remainder of the report consists of data tables, showing college enrollments by area of residence. The report indicates that a large number of students are participating in intradistrict flow. For example, of the 8,899 community college students living within the service area of Los Angeles Mission College (LAMC), only 3,166 were attending LAMC in fall 1987, while 3,523 were attending Los Angeles Valley College and 1,911 were attending Los Angeles Pierce College. During the same year, a little over 8,000 students living in neighboring community college districts attended the LACCD, while approximately 34,000 students residing in the LACCD were attending neighboring districts. LOS ANGELES COMMUNITY COLLEGE DISTRICT
ENROLLMENT BY COLLEGE AND AREA
OF RESIDENCE -- FALL 1987

The following figures and table were developed as a means for the individual colleges in the Los Angeles Community College District to look at their specific student enrollment patterns by zipcode of residence for the Fall 1987 semester. A combination of the data from all of the colleges allows a District analysis by area of residence for the total student enrollment of the District for that semester. In all cases the source of the data is the Student Data Tape 551, Data Processing Services Division, Los Angeles Community College District.

FIGURE AND TABLE DESCRIPTIONS

The first eighteen maps (two for each college labelled A and B) Figures 1 through 9 are zipcode maps of the nine individual colleges in the Los Angeles Community College District service areas arranged in collegiate alphabetical order. In all cases the Figure *A and Figure *B were used in the same manner. The maps were created by drawing rings at two, four, six, eight, and ten miles from the Los Angeles Community College District college campus shown in the center of the map with a star. The community colleges that fall into the area of the ten mile radius are also shown by a star. The two series of figures which need to be utilized in tandem were designed so as to eliminate overcrowding on the map face as follows:

In the *A series of figures the data on the numbers of students enrolled at the individual college by zipcode as derived from Table 1 were then inserted on the map with one dot equalling one student. The college names are also labelled on the *A figure.

In the *B series of figures the same area as *A is utilized, but now the zipcode numbers of the various areas are printed on a map devoid of the dots and the college names. The colleges themselves are still represented by a star.

Figures 10A, 10B, and 10C cover all of the Los Angeles Community College District and the neighboring districts. All three of the figures cover the same total area and are designed to show different aspects of this enrollment study. The twenty-one community colleges in the greater Los Angeles area are each shown by a star on all three maps. A series of maps were utilized so that the map face did not become overcrowded.

Figure 10A is a map of the zipcodes in the area commonly referred to as the Greater Los Angeles Area. On this map one dot per student is inserted in the appropriate zipcode, and thus a total view can be seen of where the students who attend an LACCD college reside.

Figure 10B shows the boundaries of the service areas of the twenty-one colleges in the greater Los Angeles area. A ring is placed at a radius of six miles from each of the colleges.

Figure 10C shows the boundaries of the service areas of the twenty-one colleges in the greater Los Angeles area. The area which includes the nine LACCD colleges is thatched (the Los Angeles Community College District). All twenty-one of the colleges are labelled.

Table 1 is a listing of all of the zipcodes in the greater Los Angeles Area organized by LACCD college service area, followed by the greater Los Angeles County neighboring colleges (all in alphabetical order), followed by the Ventura and Antelope Valley districts. The zipcodes are listed with a very general designation preceding the zipcode number to show the geographic area. The areas which had less than 25 students in any single zipcode were coalesced, and shown with the label "combined".

On the horizontal parameter of Table 1 the nine LACCD colleges are listed (alphabetical order) followed by the district. On the vertical parameter are the numbers of students who attended each of the colleges and the District from each of the zipcodes. For each of the nine LACCD colleges a separate sheet was utilized, and the totals for that service area are shown. Thus it is very easy to look at a college's service area and see how many students from that area attend that college, other colleges within the LACCD, and the total LACCD. The same procedure was utilized for the neighboring districts, and the table makes it obvious which students from which neighboring districts are inflowing into the LACCD.

SUMMARY ANALYSIS OF THE FIGURES AND TABLE

Looking at the figures it is obvious that at some of the LACCD colleges a large number of students are taking part in the phenomena of intradistrict flow. The number of students attending some of the colleges from outside of that college's six mile radius is rather surprising. Some of this can certainly be explained by looking at Figure 10B and noting the number of college six mile service areas that overlap. The exact numbers of students which take part in this process can be seen in Table 1 by looking at the "Totals for the College Service Areas" at the bottom of the pages.

The data in Table 1 (pages 34 through 38) details the number of students which inflow into the LACCD. In Fall 1987 this amounted to a little over 8,000 students. At East, Trade, and West over 3,000 students attended these three campuses alone (each campus had over 1,000 students from neighboring districts attending their campuses). This is certainly a phenomena that is not appreciated when considering just the phenomena of outflow.

None of the data contained in this report tells us anything about the LACCD students which are attending neighboring colleges (outflow). Figure 10B shows rather dramatically how many of the neighboring college six mile radius areas overlap the LACCD's. For Fall 1987 their were about 34,000 students residing in the LACCD which attended neighboring districts. Santa Monica, El Camino, Pasadena, and Glendale were by far the largest of the outflow schools with some 27,000 students attending those four campuses alone.
